

What is Flux Charging?

Flux Charging is an electric vehicle infrastructure company based in Houston, Texas. Flux Charging aims to distribute and operate the largest network of EV charging stations to the rapidly increasing EV owner population in Houston and nearby cities. Alongside its charging stations, Flux Charging creates technology that is used around it, such as the Flux Charging App.

Flux Charging provides a seamless user experience that allows EV drivers to easily integrate charging into their lives. We plan to create fast charging stations at convenient locations such as grocery stores, malls, and parking lots. Our app, which features a state-of-the-art user-friendly AI system, simplifies the payment methods and makes the process of finding the closest station near you practically effortless.

With the increase in demand for electric vehicles, we're here to supply energy for this growing industry. We make the transition from gas to electric effortless by making charging stations more accessible while accommodating for each car brand. Providing more stations makes the switch to electric a simpler and smarter choice.

Our Mission

Flux Charging will empower the emerging future of electric vehicles by expanding our charging station network. Our initiative aims to bring fast, easy, and efficient energy to all of our users so the switch to EV's is one without compromises. Our stations will be in highly-populated areas and are also easy to install for at-home charging. Reducing our carbon footprint using more EV's will make a significant change in climate change.

Our Team

Liangely Aloyo, Hunter College, 2021

Brian Bui, University of Houston, 2021

Shania Tran, University of Houston, 2022

Michael Crump, University of Houston, 2022
